1. This syringe is to be used for flushing the lower wisdom tooth (teeth) sockets unless otherwise directed.
2. Start using the syringe **5 DAYS AFTER** your surgery.
3. Use salt water, gentle mouth wash, or warm tap water to irrigate out the sockets from which the lower wisdom tooth (teeth) has been removed. The plastic mono jet syringe tip should be placed into the socket to assure thorough irrigation.
4. Irrigation should be done after meals and at bedtime after brushing your teeth until the gum tissue has completed healing over the extraction socket(s) and food is no longer being trapped.
